THE FUTURE IN  
AIR EXTRACTION

“STAR”

WINNER - New Product Design Award for Kitchen Appliances

[www.integratedappliancegroup.com.au](http://www.integratedappliancegroup.com.au)

## Evolution Series

The unique super-compact "all-in-one" system, patented by Elica has revolutionised the world of "home" ventilation.

Evolution uses the same cutting edge technology with attention to detail that makes Elica's products so special.

Integrated into a compact stainless steel cylinder are all the components needed for a highly efficient air extraction fan including the motor, fan, filters, lighting and controls. Evolution truly is the first fully integrated system for air treatment.

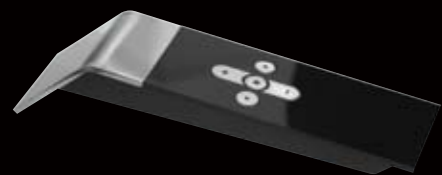

### Magic Wand

Our latest cutting edge technology "magically" enclosed in a slender steel stem.

The gentlest of touches to the upper section controls the extraction speed, another to the lower and the lighting dims or brightens to your command. An illuminated ring on the stem, changes colour with each touch to keep you informed of the current extraction speed.

### Remote Control

For even greater convenience, selected models offer, as an option, the ease of a remote control for both light and extraction control. Innovative design once again gives the remote control units that special "Elica" look.

## Designer Series

Lose yourself in the music you love. Listen to the happy bubbling chatter of your kids telling you about their day at school. Luxuriate in the subtle vibrations of the world as it turns around you.

Exceptionally silent, almost imperceptible at low speeds, EDS3 is Elica's latest innovation to enrich your life, providing the maximum possible reduction in noise emission.

Reducing noise pollution by more than 35% compared to traditional air extraction canopy rangehoods, Elica's innovative EDS3 system, working at an airflow of 500 m3/h, provides a noise level of less than 45 db/a.

Rock

## OM Series

Elica now designs the air itself.

Precision engineering directs the airflow across the entire surface of the air extraction fan, thus increasing the effective extraction area.

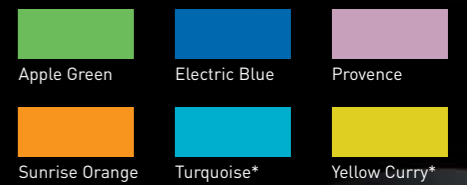

This Elica developed system reduces energy consumption and noise and has led to the development of some of our most striking air extraction fan designs.

**Recognised at designEx 2008 with the New Product Design Award for Kitchen Appliances, Integrated Appliance Group introduces the Elica Collection....the first high quality line of air extraction products to integrate design, lighting and air purification.**

The Elica Collection revolutionises air extraction from functional workhorse to a glamorous, chic and sophisticated addition to any space. Stand back and get ready to be dazzled by the future in kitchen appliances.

Design is the unifying element and guiding philosophy of the entire Elica Collection. Universally acclaimed for its radically innovative appearance, Elica Collection transforms a kitchen into a unique and distinctive environment.

Central to the whole range of products are the items produced in partnership with David Lewis, of Bang & Olufsen, who has amazed the world with his designs for more than 30 years.

Today, Elica Collection products are far more than simple air extraction fans for domestic kitchens: they are key personalities that define the environment they are installed in.

**Elica no longer designs air extraction fans: it designs the air itself.**
